FABRIC & CONNECTIVITY

Garmo Autonomous Chiplet Fabric (GACF)

Link attach; remote enumeration; remote CSR/DMA/stream/event/trace; recovery

IP-091 · Architecture IP · Architecture

Function and architecture

- Link attach
- remote enumeration
- remote CSR/DMA/stream/event/trace
- recovery

Integration summary

Garmo Autonomous Chiplet Fabric (GACF) integration role: Autonomous multi-die hardware fabric. Documented composition: Link attach; remote enumeration; remote CSR/DMA/stream/event/trace; recovery.

Technical record

Canonical identity	IP-091
Responsibility	Autonomous multi-die hardware fabric
Documented building blocks	Link attach; remote enumeration; remote CSR/DMA/stream/event/trace; recovery
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Engineering build-spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
