FABRIC & CONNECTIVITY

GUPF

GMPHY + Channel Compiler + media/protocol adapters + autonomous repair

IP-096 · Architecture IP · Architecture

Function and architecture

- GMPHY physical-layer composition
- Channel Compiler integration
- Media and protocol adaptation
- Autonomous repair coordination

Integration summary

GUPF integration role: Universal Physical Fabric. Documented composition: GMPHY + Channel Compiler + media/protocol adapters + autonomous repair.

Technical record

Canonical identity	IP-096
Responsibility	Universal Physical Fabric
Documented building blocks	GMPHY + Channel Compiler + media/protocol adapters + autonomous repair
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Engineering build-spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
