RELIABILITY & SAFETY

GKRE

Quality vector; repair map; degraded-use grading; die pairing

IP-102 · Architecture IP · Architecture

Function and architecture

- Quality vector
- repair map
- degraded-use grading
- die pairing

Integration summary

GKRE integration role: Known-Good-Die + Repair Engine. Documented composition: Quality vector; repair map; degraded-use grading; die pairing.

Technical record

Canonical identity	IP-102
Responsibility	Known-Good-Die + Repair Engine
Documented building blocks	Quality vector; repair map; degraded-use grading; die pairing
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Engineering build-spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
