POWER & CONTROL

GAPF

Budget allocation; DVFS; thermal/droop policy; workload/link/memory coordination

IP-103 · Architecture IP · Architecture

Function and architecture

- Budget allocation
- thermal/droop policy
- workload/link/memory coordination

Integration summary

GAPF integration role: Adaptive Power Fabric. Documented composition: Budget allocation; DVFS; thermal/droop policy; workload/link/memory coordination.

Technical record

Canonical identity	IP-103
Responsibility	Adaptive Power Fabric
Documented building blocks	Budget allocation; DVFS; thermal/droop policy; workload/link/memory coordination
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Engineering build-spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
