FABRIC & CONNECTIVITY

GDI — Die Interface

Die identity, discovery, health, D2D adapters and package topology semantics

IP-114 · Architecture IP · Architecture

Function and architecture

• Die identity

• discovery

• health

• D2D adapters and package topology semantics

Integration summary

GDI — Die Interface integration role: Multi-die logical interface. Documented composition: Die identity, discovery, health, D2D adapters and package topology semantics.

Technical record

Canonical identity	IP-114
Responsibility	Multi-die logical interface
Documented building blocks	Die identity, discovery, health, D2D adapters and package topology semantics
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

• Interface version and parameter set

• Clock/reset domains and integration constraints

• Companion memory, PHY and software requirements

• Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Build specification

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
