FABRIC & CONNECTIVITY

GSH-X2 / GSH-130X2

More slots, remote GFI, route tables, extra DMA queues, link health and multi-die discovery

IP-119 · Architecture IP · Architecture

Function and architecture

- More slots
- remote GFI
- route tables
- extra DMA queues
- link health and multi-die discovery

Integration summary

GSH-X2 / GSH-130X2 integration role: Chiplet-native GSH extension. Documented composition: More slots, remote GFI, route tables, extra DMA queues, link health and multi-die discovery.

Technical record

Canonical identity	IP-119
Responsibility	Chiplet-native GSH extension
Documented building blocks	More slots, remote GFI, route tables, extra DMA queues, link health and multi-die discovery
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Engineering build-spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
