FABRIC & CONNECTIVITY

GUSF — Universal Silicon Fabric

GSH + GFI + GUT + resource graph + GMPHY/GACF + QoS/isolation/health

IP-130 · Architecture IP · Architecture

Function and architecture

- GSH, GFI and GUT resource composition
- System resource graph
- GMPHY and GACF connectivity
- Quality-of-service, isolation and health boundaries

Integration summary

GUSF — Universal Silicon Fabric integration role: Universal resource fabric. Documented composition: GSH + GFI + GUT + resource graph + GMPHY/GACF + QoS/isolation/health.

Technical record

Canonical identity	IP-130
Responsibility	Universal resource fabric
Documented building blocks	GSH + GFI + GUT + resource graph + GMPHY/GACF + QoS/isolation/health
Delivery boundary	Architecture
Evidence scope	Architecture IP

Delivery and release binding

- Interface version and parameter set
- Clock/reset domains and integration constraints
- Companion memory, PHY and software requirements
- Verification collateral and acceptance criteria

Confirm for the selected release: Node/library binding, Clock/reset limits, Physical and protocol dependencies, Artifact hashes, Acceptance criteria.

Evidence and qualification

Canonical technology and its architecture/integration role are recorded. The offered delivery is confirmed against the exact release before licensing.

No node-port, silicon-performance, standards certification or analog qualification is inherited from a related product.

Canonical status: Full build spec

Evaluation and licensing

Evaluation: Evaluate an individual IP configuration. Production: Named-design production license. Custom work: Node binding or derivative integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
