CPU & EXECUTION

NWAYO Context Capsule Architecture

Portable architectural transfer object for migration, interrupt, virtualization and accelerator boundaries, carrying canonical state references, PC/retirement, domain/epoch, translation, event and MCT context.

IP-3754 · Source / reference evidence · RTL / reference evaluation

Function and architecture

• Portable architectural transfer object for migration, interrupt, virtualization and accelerator boundaries, carrying canonical state references, PC/retirement, domain/epoch, translation, event and MCT context.

Integration summary

NWAYO Context Capsule Architecture provides the documented context / migration architecture responsibility: Portable architectural transfer object for migration, interrupt, virtualization and accelerator boundaries, carrying canonical state references, PC/retirement, domain/epoch, translation, event and MCT context. Evaluate the exact NWAYO-IP-010 implementation and confirm its integration contract before using it inside the target design.

Technical record

Canonical identity	IP-3754
Native implementation identity	NWAYO-IP-010
Documented responsibility	Portable architectural transfer object for migration, interrupt, virtualization and accelerator boundaries, carrying canonical state references, PC/retirement, domain/epoch, translation, event and MCT context.
Recorded evidence class	Source / reference evidence
Interface and physical parameters	Bound to the selected source/configuration; not inferred from name or family.

Delivery and release binding

• Exact implementation and configuration manifest

• Documented interfaces and clock/reset contract

• Available reference or verification collateral

• Recorded physical views where authorized and applicable

• Integration acceptance criteria and unresolved gate list

Confirm for the selected release: Source/configuration identity, Interface and dependencies, Verification evidence, Process/library where applicable, Authorized package and acceptance criteria.

Evidence and qualification

Evidence retained in our records

Evidence shown is our record for this canonical implementation, not a fresh tool rerun. External foundry acceptance, silicon measurements, standards certification and unlisted interface/physical parameters are not inferred. Exact delivery and rights are agreed before licensing.

Canonical status: P1 / IMPLEMENTATION-BACKED ARCHITECTURE

Evaluation and licensing

Evaluation: Review the exact recorded implementation and agreed test scope. Production: Named-design rights for the agreed qualified release. Custom work: Target integration, verification or physical qualification. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
