TEST, DEBUG & RELIABILITY

NWAYO Precise Federate Migration Boundary Contract

Migration is permitted only at precise boundaries with valid contract, no pending store/fault and compatible domain context; implementation-private resume hints never define correctness.

IP-3755 · Source / reference evidence · RTL / reference evaluation

Function and architecture

• Migration is permitted only at precise boundaries with valid contract, no pending store/fault and compatible domain context

• implementation-private resume hints never define correctness

Integration summary

NWAYO Precise Federate Migration Boundary Contract provides the documented migration / recovery architecture responsibility: Migration is permitted only at precise boundaries with valid contract, no pending store/fault and compatible domain context; implementation-private resume hints never define correctness. Evaluate the exact NWAYO-IP-011 implementation and confirm its integration contract before using it inside the target design.

Technical record

Canonical identity	IP-3755
Native implementation identity	NWAYO-IP-011
Documented responsibility	Migration is permitted only at precise boundaries with valid contract, no pending store/fault and compatible domain context; implementation-private resume hints never define correctness.
Recorded evidence class	Source / reference evidence
Interface and physical parameters	Bound to the selected source/configuration; not inferred from name or family.

Delivery and release binding

• Exact implementation and configuration manifest

• Documented interfaces and clock/reset contract

• Available reference or verification collateral

• Recorded physical views where authorized and applicable

• Integration acceptance criteria and unresolved gate list

Confirm for the selected release: Source/configuration identity, Interface and dependencies, Verification evidence, Process/library where applicable, Authorized package and acceptance criteria.

Evidence and qualification

Evidence retained in our records

Evidence shown is our record for this canonical implementation, not a fresh tool rerun. External foundry acceptance, silicon measurements, standards certification and unlisted interface/physical parameters are not inferred. Exact delivery and rights are agreed before licensing.

Canonical status: P1 / SOURCE-CONTAINED RTL PROOF

Evaluation and licensing

Evaluation: Review the exact recorded implementation and agreed test scope. Production: Named-design rights for the agreed qualified release. Custom work: Target integration, verification or physical qualification. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
