MEMORY & COHERENCY

SONJE VMOL Metadata Contract

Associates architectural version, domain/permissions/epoch, sharing mode, tier/migration state, ECC/poison/scrub, dirty/persistence and QoS/deadline state with each logical line.

IP-3879 · Source / reference evidence · RTL / reference evaluation

Function and architecture

• Associates architectural version, domain/permissions/epoch, sharing mode, tier/migration state, ECC/poison/scrub, dirty/persistence and QoS/deadline state with each logical line.

Integration summary

SONJE VMOL Metadata Contract provides the documented memory metadata architecture responsibility: Associates architectural version, domain/permissions/epoch, sharing mode, tier/migration state, ECC/poison/scrub, dirty/persistence and QoS/deadline state with each logical line. Evaluate the exact SONJE-IP-003 implementation and confirm its integration contract before using it inside the target design.

Technical record

Canonical identity	IP-3879
Native implementation identity	SONJE-IP-003
Documented responsibility	Associates architectural version, domain/permissions/epoch, sharing mode, tier/migration state, ECC/poison/scrub, dirty/persistence and QoS/deadline state with each logical line.
Recorded evidence class	Source / reference evidence
Interface and physical parameters	Bound to the selected source/configuration; not inferred from name or family.

Delivery and release binding

• Exact implementation and configuration manifest

• Documented interfaces and clock/reset contract

• Available reference or verification collateral

• Recorded physical views where authorized and applicable

• Integration acceptance criteria and unresolved gate list

Confirm for the selected release: Source/configuration identity, Interface and dependencies, Verification evidence, Process/library where applicable, Authorized package and acceptance criteria.

Evidence and qualification

Evidence retained in our records

Evidence shown is our record for this canonical implementation, not a fresh tool rerun. External foundry acceptance, silicon measurements, standards certification and unlisted interface/physical parameters are not inferred. Exact delivery and rights are agreed before licensing.

Canonical status: P1 / IMPLEMENTATION-BACKED METADATA CONTRACT; EXPANDED TABLE RTL UNEXECUTED

Evaluation and licensing

Evaluation: Review the exact recorded implementation and agreed test scope. Production: Named-design rights for the agreed qualified release. Custom work: Target integration, verification or physical qualification. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
