VERIFICATION

Signoff Assurance

Fail-closed semiconductor evidence assurance product with provenance/hash binding, clock/EM/fallback/physical gates, deterministic ledger, signing and conservative adapters.

IP-4268 · Engineering software · Software / tooling

Function and architecture

• Fail-closed semiconductor evidence assurance product with provenance/hash binding, clock/EM/fallback/physical gates, deterministic ledger, signing and conservative adapters.

• Evaluation and enterprise licensing

• Controlled release and integration scope

Integration summary

Signoff Assurance: Fail-closed semiconductor evidence assurance product with provenance/hash binding, clock/EM/fallback/physical gates, deterministic ledger, signing and conservative adapters. Delivered as Software / tooling. Integrate the selected version at its documented input/output boundary; retain source and configuration identity with each result. The exact callable API, dependencies and runtime environment are supplied with the controlled release; this public description is not a substitute for that release contract.

Technical record

Canonical identity	IP-4268
Responsibility	Fail-closed semiconductor evidence assurance product with provenance/hash binding, clock/EM/fallback/physical gates, deterministic ledger, signing and conservative adapters.
Delivery boundary	Software / tooling
Evidence scope	Engineering software
Engineering boundary	Fail-closed semiconductor evidence assurance product with provenance/hash binding, clock/EM/fallback/physical gates, deterministic ledger, signing and conservative adapters.
Deployment	Software / tooling; 1.0
Operational scope	Generated hardware and third-party tool results require their own exact-release qualification.

Delivery and release binding

• Versioned package and dependency lock

- Deployment environment and access controls
- Input/output schemas and integration examples
- Evaluation scope, support and update policy

Confirm for the selected release: Environment and dependencies, Version / build hash, API compatibility, License and support scope.

Evidence and qualification

The controlled product-release layer includes executable reference surfaces and qualification records. Request the exact selected release bundle.

Generated hardware and third-party tool results require their own exact-release qualification.

Canonical status: P2 / EXECUTABLE QUALIFIED SOFTWARE RELEASE; EXTERNAL CUSTOMER/FOUNDRY VALIDATION OPEN

Evaluation and licensing

Evaluation: Evaluate the named software release. Production: Team or enterprise deployment. Custom work: Workflow and API integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
