VERIFICATION

IP Qualification Factory

Policy-driven qualification engine that binds required semiconductor verification/signoff gates to exact evidence hashes and refuses ambiguous/missing release evidence.

IP-4278 · Engineering software · Software / tooling

Function and architecture

• Policy-driven qualification engine that binds required semiconductor verification/signoff gates to exact evidence hashes and refuses ambiguous/missing release evidence.

• Evaluation and enterprise licensing

• Controlled release and integration scope

Integration summary

IP Qualification Factory: Policy-driven qualification engine that binds required semiconductor verification/signoff gates to exact evidence hashes and refuses ambiguous/missing release evidence. Delivered as Software / tooling. Integrate the selected version at its documented input/output boundary; retain source and configuration identity with each result. The exact callable API, dependencies and runtime environment are supplied with the controlled release; this public description is not a substitute for that release contract.

Technical record

Canonical identity	IP-4278
Responsibility	Policy-driven qualification engine that binds required semiconductor verification/signoff gates to exact evidence hashes and refuses ambiguous/missing release evidence.
Delivery boundary	Software / tooling
Evidence scope	Engineering software
Engineering boundary	Policy-driven qualification engine that binds required semiconductor verification/signoff gates to exact evidence hashes and refuses ambiguous/missing release evidence.
Deployment	Software / tooling; 1.0
Operational scope	Generated hardware and third-party tool results require their own exact-release qualification.

Delivery and release binding

• Versioned package and dependency lock

• Deployment environment and access controls

• Input/output schemas and integration examples

• Evaluation scope, support and update policy

Confirm for the selected release: Environment and dependencies, Version / build hash, API compatibility, License and support scope.

Evidence and qualification

The controlled product-release layer includes executable reference surfaces and qualification records. Request the exact selected release bundle.

Generated hardware and third-party tool results require their own exact-release qualification.

Canonical status: P2 / EXECUTABLE SOFTWARE; UNDERLYING EDA RESULTS EXTERNAL

Evaluation and licensing

Evaluation: Evaluate the named software release. Production: Team or enterprise deployment. Custom work: Workflow and API integration. Rights, pricing, support and acceptance criteria are agreed for the exact scope.
